

Nuix Version 2.20

Nuix 2.20 introduces a number of new features to the core processing of the product.

EnCase Logical Evidence Files

- Of particular relevance to corporate and law enforcement customers is the ability to process **EnCase Logical Evidence Files** (L01 Files). This new functionality means EnCase Enterprise users can now take these EnCase files and process them directly with Nuix in a faster and more user friendly environment.

Processing

- Nuix 2.20 introduces the Nuix Evidence Browser which provides pre-processing visibility into complex database files such as Exchange Database Files (EDBs), allowing specific custodian or file group selection for processing. Nuix 2.20 is the only system that can examine EDB and other database files and enable users to select specific mailboxes, folders or other data subsets to process.
- Nuix 2.20 has also added the ability to process highly encrypted Outlook files, Excel 2007 binary spreadsheets and Microsoft Project files.

Export

- Additional functionality has also been added on the export side, with the ability to:
 - export per-page text files
 - customize the amount of memory allocated to the legal export
 - process and generate slip-sheets for container items, such as Zip files and directories, in the legal export.
- Nuix has also added the ability to export to Discovery Radar.
- The new 'Regenerate native' option will re-compute the binary contents of an item and store it in the case – speeding up subsequent retrievals.

Other new features in Nuix 2.20 include:

- A time-zone setting when adding new evidence, so that a default time zone can be specified for items which contain date properties but have no time zone information, such as Microsoft Project Files
- Support for getting text from the slide masters and title masters of PowerPoint 97-2003 documents
- Ability to customise the memory allocation to load processing workers in the advanced case settings
- Ability to remove jobs and items from a Fast Review
- Faster retrieval of top-level items processed with 2.20
- Searches recorded in the history now show when the option to remove duplicates was selected
- Other general performance enhancing improvements.

ABOUT NUIX

Nuix has spent the past nine years developing and refining the world's most advanced eDiscovery and electronic investigation software. Nuix revolutionizes the way government and private organisations investigate electronic information, improving simplicity and accuracy and slashing the time and cost of investigations. Nuix customers include all major advisory firms, litigation support firms, state and federal government departments, regulatory and security agencies, police and anti-corruption bodies, financial institutions, corporations and law firms.
